

# Absorber A500

Premium elegant sound absorbers in four standard sizes and two single-coloured decorative fabrics for walls and ceilings

The A500 is a highly effective, broadband sound absorber designed and manufactured in Germany. Every wall and ceiling module is covered with fabric available in two materials and currently 29 colours altogether. The A500 reduces

the reverberation in event rooms, offices and lounges. It increases the speech intelligibility in seminar rooms and classrooms and decreases the noise level in daycare centers, schools and restaurants. Unlike the A100, the exter-

nal cover of the A500 is made from an aluminium frame which leads to improved stability and precise edge design. The frame itself is also covered, there are no visible wooden or metal frame parts.

## Specifications A500
